                                                                                                                                                                                                 defined as the Fas gene promoter region. This includes a number of transcription factor binding sites. A coding sequence for the N-terminal portion (AAR99471) of the Fas protein leader peptide is also included. The DNA segment was isolated from a human ras cDNA placental DNA library using a 32P-labeled segment of human ras cDNA corresponding to nt 23-346. It can be combined with a structural gene so that the gene is under the transcriptional control of the transcription factor binding sites. The promoter region can be used to regulate Fas gene expression, e.g. in tumour or immune cells, as a means of treating Fas-mediated apoptosis disorders such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO200200928-A2.
                                                    The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, heurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/vlacerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2002-130909/17.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,

The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, proteins and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, such as gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1766 aagctttagggtcgctggagggggaccccggttggagaggaggagcggaactcctggacaa 1825
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 binding region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 266 BP; 49 A; 72 C; 110 G; 35 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes human Fas (Apo-1). The specification describes antisense compounds which are targeted to the 5'-untranslated or 3'-untranslated region of nucleic acid molecules encoding Fas, Fas plusphatase). The antisense compounds are used to inhibit the expression of Fas, FasL or Fap-1 in cells or tissues. They are used to treat autoimmune or inflammatory diseases such as hepatitis. They can also be used to treat cancer, especially colon, liver or lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2551 BP; 826 A; 493 C; 508 G; 724 T; 0 other;

The PCR product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli pH5-alpha cells insert sequence of pBluescript-Fas-delta-TM is given in AAQ93879.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding Fas protein without its trans-membrane region - and related vectors, transformed cells, transgenic animals, protein and antibodies, useful for control of Fas mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 3; Fig.3-1 to 3-4; 38pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inhibition of proinflammatory responses - using an agent which modulates FasL stimulation, used for treating graft versus host disease or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This present sequence is a DNA clone encoding soluble Fas receptor (see AAW98070). The invention provides a method for inhibiting a proinflammatory response in a cell mixture by administering an immunosuppressive agent which inhibits the proinflammatory activity of Fas ligand (FasL). In some embodiments, FasL is coadministered with the immunosuppressive agent, and the cell mixture comprises with the immunosuppressive agent, and the cell mixture comprises.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Fig 4B; 71pp; English.

                                                             AAQ95297;
                                                                                                                                                                                                                                                                                                                                                                                                                           A cDNA library was prepared from polyA+ RNA from the human lymphoma cell line KT-3. The CDNA was ligated to BstXI-cut vector pCEV4 via BstXI linkers. The KT3 cDNA library was used to transfect monkey COS-Ab. The cells were then suspended in buffer containing murine anti-Fas antibodies. The Fas-expressing cells adhered to the plates. Extrachromosomal DNA was prepared from adhered to the plates. transform E.coli VM100 cells. A 520bp XhoI-BamHI fragment from a longest cDNA clone was designated pF58 and contains an ORF corresp. to a 335 amino acid pre-protein and a 319 amino acid mature protein

The plasmid was used in the construction of an expression vector for the prodn. of recombinant soluble membrane proteins. The proteins can be used in antibody prodn. for the treatment and prevention of related diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO9601277-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the coding sequence for the human Fas antigen contained within the plasmid pCEV4/hFas. The soluble Fas antigen is included in the immunoassay kit of the invention. The kit is for the assay of soluble Fas antigen and contains an immobilised anti-soluble Fas antigen encoded monoclonal antibody, as well as the standard soluble Fas antigen encoded by this sequence. The assay is simple and has high accuracy, high by this sequence of assaying a number of different specimens sensitivity, and is capable of assaying a number of different specimens at the same time. The immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmune diseases such as rheumatoid arthritis or systemic lupus erythematosus (SIE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (MEDI-) MEDICAL & BIOLOGICAL LAB CO LTD. Reducing CD8+ lymphocyte apoptosis to treat e.g. immunodeficiency diseases - by interfering with interaction of Fas with Fas-ligand expressed on activated CD4+ cells, e.g. cells infected with HIV

Disclosure; Fig 10; 71pp; English.

The present sequence represents a Fas cDNA sequence used in the CC method of the invention. The method is concerned with reducing CC method of the invention. The method is concerned with reducing CC depletion of activated Fas-expressing CD8+ T-lymphocyte killer (TK) CC (Fast)-expressing activated CD4+ cells. It involves contacting this CC (Fast)-expressing activated CD4+ cells. It involves contacting this CC immune cell population with an effective amount of an agent (e.g. a CC immune cell population which would interfere with the CC interaction between Fas and Fast. Therefore, the method is useful for CC interaction between Fas and Fast. Therefore, the method is useful for CC interaction between Fas and Fast. The populations of activated CC identifying suitable agents which can reduce depletion of activated CC identifying suitable agents which can reduce depletions of the Signature of the manufacture of therapeutic compositions. CC is the use of the Signature of the manufacture of therapeutic compositions. CC is the use of the Signature of the manufacture of therapeutic compositions. CC cell surface receptor Fas and its ligand Fast. By interfering with CC expoptosis of CD8+ TK lymphocytes caused by expression of Fast on CC apoptosis of CD8+ TK lymphocytes caused by expression of Fast on CC apoptosis of CD8+ TK lymphocytes caused by expression of Fast on CC activated CD4+ cells. Such Fast-expressing activated CD4+ cells are activated CD4+ cells. The method described with the infection with an immunodeficiency virus (SIV). The claimed prevention of apoptosis may then allow virus (SIV). The claimed prevention of apoptosis may then allow the composition of cytotoxic Tlymphocyte (CTL) activity constraint (prophylactic and/or therapeutic) of immunodeficiency creatment (prophylactic and/or therapeutic) of immunodeficiency creatm diseases e.g. AIDS.

                         The present sequence was used in the development of novel Fas antigen derivatives, which contain a Fas antigen extracellular region lacking one or more amino acid residues in the region from the amino-terminal to (but excluding) the 1st cysteine residue. The derivatives are effective regulators of apoptosis and can be of the coding DNA in gene therapy) to treat a range of diseases, such as hepatitis, influenza and HIV, by modulating apoptosis of such as hepatitis, influenza and HIV, by modulating apoptosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Дb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                               Shuttle vector pAdDel.CMVDys (AAT27558) comprises the adenovirus cis elements needed for replication and virion encapsidation but is deleted of all viral genes. It carries a mouse dystrophin virus that supplies the sequences needed for a productive viral infection but which has disabled packaging function. Recombinant delivery to host cells and the ability to stably integrate the to transfer the dystrophin gene for use in muscular dystrophy gene therapy.

It carries a CFTR gene under the control of a chimeric CMV enhancer/Chicken beta-actin promoter. It is used with a helper virus that supplies the sequences needed for a productive viral infection but which has disabled packaging function a productive viral infection but which has disabled packaging function. Recombinant adenovirus is produced that is characterized by high there transgene delivery to host cells and the ability to stably integrate the transgene into the host cell chromosome. Such a vector can be used to transfer the CFTR gene for use in cystic fibrosis gene therapy.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                     Score
